equipaggiamenti elettrici industriali

Series 41

Characteristics
The rectangular design of the Series 41 (18 x 24 mm) makes it especially suited:

- Raised design
- PCB (with adaptor)

The series features a compact double-lit element that can be fitted from the front as a snap-on module.

Functions
The Series 41 incorporates the following functions:

- Indicator
- Illuminated pushbutton

Market segments
The EAO Series 41 is especially suited for applications in the segment:

- Machinery and Automation

Illumination

LED, T1 3/4 MG

Additional Information

- Due to high surface temperatures, the series resistor must not be soldered directly to the terminals of the equipment (use a terminal plate)
- Order two LEDs
- When using AC/DC types with AC operation, slight flickering can occure
- Luminous intensity data of the LEDs on direct voltage
- Electrical and optical data are measured at 25 °C
- The specified versions are built with a protection diode (halve wave rectifier) in series and the LED
- Luminosity and wave length variations caused by LED manufacturing processes may cause slight differences regarding the illumination
- If the 24VDC Bi-colour lamp is driven with normal polarity (plus on middle contact of the lamp) the first mentioned colour will light up, with inverted polarity the second colour will ligth up

Actuator with snap-action switching element

Switching system

Self-cleaning, double-break, snap action switching system (with contact gap 2 x 0.5 mm).
1 normally closed or 1 normally open contact per element.
Up to 4 switching elements can be on a pushbutton (max. 4 normally closed and 4 normally open contacts).

Material

Material of contacts
gold-plated silver

Switching element
Soldering terminal: PA 6.6 Ultramid

Actuator case
Polysulfone, heat-resistant and self-extinguishing

Mechanical characteristics

Connection method
Snap-action switching element with tinned soldering terminals at the sides:
max. wire diameter: 2 wires à 1.2 mm
max. wire cross-section of stranded cable: 1x 1 mm^2

Actuating force
2-5.5 N, depending on the number of switching elements

Actuating travel
3 mm

Mechanical life
Momentary action 2 million cycles of operation
Maintained action 1 million cycles of operation

Electrical characteristics

Standards
IEC 61058 EN 61 058

Rated voltage
250 VAC / VDC

Rated current
5 A

Volume resistance
Starting value ≤ 50 mΩ

Conventional free air thermal current I_{th}
5 A
The maximum current in continuous operation and at ambient temperature not exceeding the quoted maximum values.

Switch rating
250 VAC / 5 A (cosφ 1)
250 VAC / 3 A (cosφ 0.3)

Switch rating AC, cos φ 0.7:

Voltage	125 V	250 V
Current	3 A	2 A

Switch rating DC (inductive), L:R = 30 ms

Voltage	24 V	60 V	110 V	220 V
Current	2 A	0.7 A	0.2 A	0.1 A

Electric strength
2500 VAC, 50 Hz, 1 min. between all terminals and earth, as per IEC 60512-2-11

Protection class
II

Environmental conditions

Storage temperature
–40 °C to +85°C

Service temperature
-25 °C to +55 °C
for indicators and illuminated pushbuttons mounted as a block, make sure the heat can escape freely

Degree of protection
Front as per IEC 60529: IP 40

Resistance to shock
(single impacts, semi-sinusoidal)
15 g for 11 ms as per IEC 60512-4-3, IEC 60068-2-27

Resistance to vibration

Actuator with Low Level switching element

Switching system

This low level switching element was designed for switching low powers in electronic circuits. The mechanism assures reliable switching of loads ranging from a few mA/mV up to 100 mA/42 VAC/VDC.
Single-break momentary contact, as normally open or normally closed with 4 independent points of contact. 2 momentary contacts per switching element; combination of normally open and normally closed is possible.
Special features are the long life, extremely short rebound time and stable contact resistance.

Material

Actuator case
Polysulfone, heat-resistant and self-extinguishing

Material of contacts
gold-plated

Switching element
Polysulfone, heat-resistant and self-extinguishing

Mechanical characteristics

Connection method
The universal terminals permit these units to be mounted on printed circuit boards (PCB). These terminals can also be used as soldering or plug-in terminals.
For these terminals we can also supply a plug-in base which, when soldered on to the board, enables the switch to be plugged in.

Soldering terminal
max. wire diameter: 2 wires of 0.8 mm
max. wire cross-section of stranded cable: 1 x 0.75 mm^2

Plug-in terminal
2.0 x 0.5 mm

Actuating force
3-3.5 N

Actuating travel
3 mm

Rebound time
Typ. < 100 µs

Mechanical life
Momentary action 5 million cycles of operation
Maintained action 1 million cycles of operation

Electrical characteristics

Volume resistance
starting value ≤ 50 mΩ

Switch rating
10 µA/100 µV to 100 µA at 42 VAC/VDC

Electric strength
2500 VAC, 50 Hz, 1 min. between all terminals and earth, as per IEC 60512-2-11.

Protection class
II

Environmental conditions

Storage temperature
–40 °C to +85 °C

Service temperature
-25°C to +55°C
for indicators and illuminated pushbuttons mounted as a block , make sure the heat can escape freely

Degree of protection
Front as per IEC 60529: IP 40

Resistance to shock
(single impacts, semi-sinusoidal)
15 g for 11 ms as per IEC 60512-4-3, IEC 60068-2-27

Resistance to climate
Standard condition as per IEC 60068-2-3 and 2-30
Changing condition as per IEC 60068-2-14 and 2-33

General notes

1. Engraving

Typefaces
In addition to the most commonly used world languages (see DIN 1451) with close spacing, the following typefaces are available: Scandinavian, Slavian, Greek, Russian.

Coloured filling of engraving
Specify whether engraving should be on the diffuser, or on the lens. Specify the infill colour, character height and the text or symbol orientation.

Symbols
A list of the symbols available can be supplied on request.

2. Hot stamping

For large batches it is worth while to have the lettering produced by hot stamping.

Typefaces
For letters and figures, typefaces with 2.5 mm, 3 mm and 4 mm are available.

Symbols
A list of the symbols available can be supplied on request.

3. Film inserts

Instead of using engraving, the lenses can be fitted with transparent film inserts. For this purpose, though, it is advisable to use transparent lenses.
To insert the film, the feet of the lens support have to be pushed together far enough to enable the lens to be lifted off easily.

Film dimensions
max. 12.7 x 18.7 mm (monocolour lens)
max. 9 x 12.7 mm (two-colour lens)

Film thickness 0.2 mm
Important: Before engraving, check the position of the illuminated pushbuttons or indicator.

Suppressor circuits

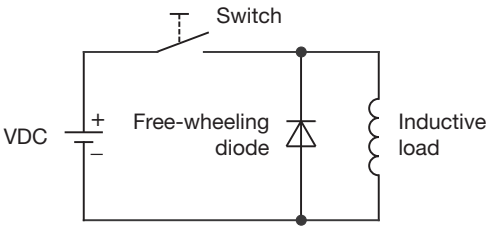
When switching inductive loads such as relays, DC motors, and DC solenoids, it is always important to absorb surges (e. g. with a diode) to protect the contacts. When these inductive loads are switched off, a counter emf can severely damage switch contacts and greatly shorten lifetime.

Fig. 1 shows an inductive load with a free-wheeling diode connected in parallel. This free-wheeling diode provides a path for the inductor current to flow when the current is interrupted by the switch. Without this free-wheeling diode, the voltage across the coil will be limited only by dielectric breakdown voltages of the circuit or parasitic elements of the coil. This voltage can be kilovolts in amplitude even when nominal circuit voltages are low (e. g. 12 VDC) see Fig. 2.

The free-wheeling diode should be chosen so that the reverse breakdown voltage is greater than the voltage driving the inductive load. The DC blocking voltage (VR) of the free-wheeling diode can be found in the datasheet of a diode. The forward current should be equal or greater than the maximum current flowing through the load.

To get an efficient protection, the free-wheeling diode must be connected as close as possible to the inductive load!

Switching with inductive load
Fig. 1



Counter EMF
over load without free-wheeling diode
